## Basic Operation Manual

### Ignition

Ignition key in the ignition lock.

Turn the key in the clockwise direction to turn on the vehicle and anti-clock wise direction to turn off.

### Charging

Open the door by lifting the door using handle.

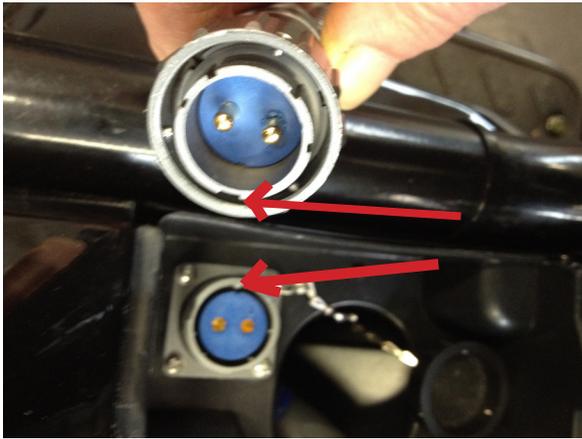

Scooter charging plug with protective cup.  
Rotate the protective cup ant- clock wise  
to remove it.

Charging plug with removed protection cup.

**IMPORTANT:**

**It is very important that protective cup is put  
on place again when charging is finished to  
protect the water entering into charging plug.**

### Connecting Charger

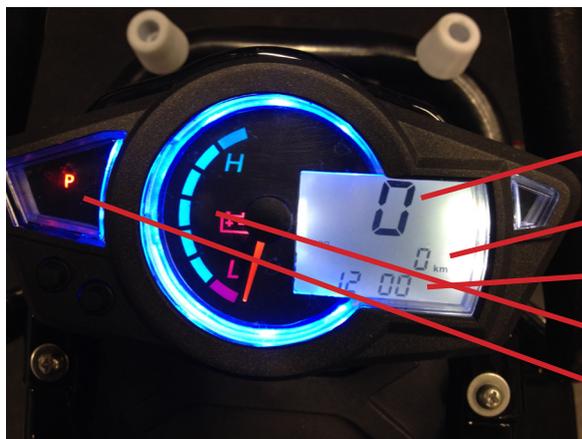

Connect charger plug to scooters charging plug by fitting arrangements shown by arrows. Then turn top-cup of chargers plug into clock-wise direction.

**Do not use force. Charging plug can be connected only in correct way. If you use force you risk to make faulty connection and seriously damage electric system.**

Charger is connected to scooters charging plug.

Now connect charger to 230V plug.

### **Assembly of front cargo bag**

Place bags pipes into holder holes

Place bags lower pipe frame behind rubber holders on the frame.

Push the bag downward to make sure it is sitting properly.

### **Important**

**After charging remember always to return protection cup on the scooters charging plug.**

**When charging, connect always first charger to the scooter and then to 230V outlet.**

**When charging is complete, the green light will appear on the charger.**

**Disconnect first 230V outlet and then chargers connection to the scooter.**

**Remember to disconnect charger before driving.**

**Charger is not water proof and can not be used outside.**

**Always charge the scooter after use, especially in the winter time.**

**Check regularly break liquid fluid level for both front and rear break.**
